Data Sheet (Full Production)

Notice to Readers: This document states the current technical specifications regarding the Spansion product(s) described herein. Spansion Inc. deems the products to have been in sufficient production volume such that subsequent versions of this document are not expected to change. However, typographical or specification corrections, or modifications to the valid combinations offered may occur.

Notice On Data Sheet Designations

Spansion Inc. issues data sheets with Advance Information or Preliminary designations to advise readers of product information or intended specifications throughout the product life cycle, including development, qualification, initial production, and full production. In all cases, however, readers are encouraged to verify that they have the latest information before finalizing their design. The following descriptions of Spansion data sheet designations are presented here to highlight their presence and definitions.

Advance Information

The Advance Information designation indicates that Spansion Inc. is developing one or more specific products, but has not committed any design to production. Information presented in a document with this designation is likely to change, and in some cases, development on the product may discontinue. Spansion Inc. therefore places the following conditions upon Advance Information content:

> "This document contains information on one or more products under development at Spansion Inc. The information is intended to help you evaluate this product. Do not design in this product without contacting the factory. Spansion Inc. reserves the right to change or discontinue work on this proposed product without notice."

Preliminary

The Preliminary designation indicates that the product development has progressed such that a commitment to production has taken place. This designation covers several aspects of the product life cycle, including product qualification, initial production, and the subsequent phases in the manufacturing process that occur before full production is achieved. Changes to the technical specifications presented in a Preliminary document should be expected while keeping these aspects of production under consideration. Spansion places the following conditions upon Preliminary content:

> "This document states the current technical specifications regarding the Spansion product(s) described herein. The Preliminary status of this document indicates that product qualification has been completed, and that initial production has begun. Due to the phases of the manufacturing process that require maintaining efficiency and quality, this document may be revised by subsequent versions or modifications due to changes in technical specifications."

Combination

Some data sheets contain a combination of products with different designations (Advance Information, Preliminary, or Full Production). This type of document distinguishes these products and their designations wherever necessary, typically on the first page, the ordering information page, and pages with the DC Characteristics table and the AC Erase and Program table (in the table notes). The disclaimer on the first page refers the reader to the notice on this page.

Full Production (No Designation on Document)

When a product has been in production for a period of time such that no changes or only nominal changes are expected, the Preliminary designation is removed from the data sheet. Nominal changes may include those affecting the number of ordering part numbers available, such as the addition or deletion of a speed option, temperature range, package type, or VIO range. Changes may also include those needed to clarify a description or to correct a typographical error or incorrect specification. Spansion Inc. applies the following conditions to documents in this category:

> "This document states the current technical specifications regarding the Spansion product(s) described herein. Spansion Inc. deems the products to have been in sufficient production volume such that subsequent versions of this document are not expected to change. However, typographical or specification corrections, or modifications to the valid combinations offered may occur."

Questions regarding these document designations may be directed to your local sales office.

FM3 MB9A150RA Series

32-bit ARM™ Cortex™-M3 based Microcontroller MB9AF154MA/NA/RA, MB9AF155MA/NA/RA, MB9AF156MA/NA/RA

Data Sheet (Full Production)

■ DESCRIPTION

The MB9A150RA Series are highly integrated 32-bit microcontrollers dedicated for embedded controllers with low-power consumption mode and competitive cost.

These series are based on the ARM Cortex-M3 Processor with on-chip Flash memory and SRAM, and have peripheral functions such as various timers, ADCs, and Communication Interfaces (UART, CSIO, I^2C).

The products which are described in this data sheet are placed into TYPE8 product categories in "FM3 Family PERIPHERAL MANUAL".

Note: ARM and Cortex are the trademarks of ARM Limited in the EU and other countries.

Publication Number MB9AF156RA_DS706-00047 Revision 2.0 Issue Date April 4, 2014

■ FEATURES

- 32-bit ARM Cortex-M3 Core
  - Processor version: r2p1
  - Up to 40 MHz Frequency Operation
  - Integrated Nested Vectored Interrupt Controller (NVIC): 1 NMI (non-maskable interrupt) and 48 peripheral interrupts and 16 priority levels
  - 24-bit System timer (Sys Tick): System timer for OS task management

- On-chip Memories

[Flash memory]

  - Dual operation Flash memory
    - Dual Operation Flash memory has the upper bank and the lower bank. So, this series could implement erase, write and read operations for each bank simultaneously.
  - Main area: Up to 512Kbytes (Upto 496Kbytes upper bank + 16Kbytes lower bank)
  - Work area: 32Kbytes (lower bank)
  - Read cycle: 0 wait-cycle
  - Security function for code protection

[SRAM]

This Series on-chip SRAM is composed of two independent SRAM (SRAM0, SRAM1). SRAM0 is connected to I-code bus or D-code bus of Cortex-M3 core. SRAM1 is connected to System bus.

  - SRAM0: Up to 32 Kbytes
  - SRAM1: Up to 32 Kbytes

- External Bus Interface
  - Supports SRAM, NOR NAND Flash memory device
  - Up to 8 chip selects
  - 8/16-bit Data width
  - Up to 25-bit Address bit
  - Maximum area size : Up to 256 Mbytes
  - Supports Address/Data multiplex
  - Supports external RDY function

- Multi-function Serial Interface (Max 16channels)
  - 16 channels with 16steps×9-bit FIFO
  - Operation mode is selectable from the followings for each channel.
    - UART
    - CSIO
    - I^2C

[UART]

  - Full-duplex double buffer
  - Selection with or without parity supported
  - Built-in dedicated baud rate generator
  - External clock available as a serial clock
  - Hardware Flow control: Automatically control the transmission/reception by CTS/RTS (only ch.4)
  - Various error detection functions available (parity errors, framing errors, and overrun errors)

[CSIO]

  - Full-duplex double buffer
  - Built-in dedicated baud rate generator
  - Overrun error detection function available

[I^2C]

Standard-mode (Max 100kbps) / Fast-mode (Max 400kbps) supported

- DMA Controller (8channels)
  The DMA Controller has an independent bus from the CPU, so CPU and DMA Controller can process simultaneously.

  - 8 independently configured and operated channels
  - Transfer can be started by software or request from the built-in peripherals
  - Transfer address area: 32-bit (4 Gbytes)
  - Transfer mode: Block transfer/Burst transfer/Demand transfer
  - Transfer data type: byte/half-word/word
  - Transfer block count: 1 to 16
  - Number of transfers: 1 to 65536

- A/D Converter (Max 24channels)

[12-bit A/D Converter]

  - Successive Approximation type
  - Built-in 2units
  - Conversion time: 2.0µs @ 2.7V to 3.6V
  - Priority conversion available (priority at 2levels)
  - Scanning conversion mode
  - Built-in FIFO for conversion data storage (for SCAN conversion: 16steps, for Priority conversion: 4steps)

- Base Timer (Max 16channels)
  Operation mode is selectable from the followings for each channel.

  - 16-bit PWM timer
  - 16-bit PPG timer
  - 16/32-bit reload timer
  - 16/32-bit PWC timer

- General-Purpose I/O Port
  This series can use its pins as general-purpose I/O ports when they are not used for external bus or peripherals. Moreover, the port relocate function is built in. It can set which I/O port the peripheral function can be allocated to.

  - Capable of pull-up control per pin
  - Capable of reading pin level directly
  - Built-in the port relocate function
  - Up to 103 high-speed general-purpose I/O Ports@120pin Package
  - Some ports are 5V tolerant I/O
    See "■ LIST OF PIN FUNCTIONS" and "■ I/O CIRCUIT TYPE" to confirm the corresponding pins.

- Dual Timer (32/16-bit Down Counter)
  The Dual Timer consists of two programmable 32/16-bit down counters.
  Operation mode is selectable from the followings for each channel.

  - Free-running
  - Periodic (=Reload)
  - One-shot

- Multi-function Timer
  The Multi-function timer is composed of the following blocks.

  - 16-bit free-run timer × 3ch.
  - Input capture × 4ch.
  - Output compare × 6ch.
  - A/D activation compare × 2ch.
  - Waveform generator × 3ch.
  - 16-bit PPG timer × 3ch.

  The following function can be used to achieve the motor control.

  - PWM signal output function
  - DC chopper waveform output function
  - Dead time function
  - Input capture function
  - A/D convertor activate function
  - DTIF (Motor emergency stop) interrupt function

- Quadrature Position/Revolution Counter (QPRC)
  The Quadrature Position/Revolution Counter (QPRC) is used to measure the position of the position encoder. Moreover, it is possible to use as the up/down counter.

  - The detection edge of the three external event input pins AIN, BIN and ZIN is configurable.
  - 16-bit position counter
  - 16-bit revolution counter
  - Two 16-bit compare registers

- HDMI-CEC/Remote Control Reception (Up to 2channels)
  - HDMI-CEC transmission
    - Header block automatic transmission by judging Signal free
    - Generating status interrupt by detecting Arbitration lost
    - Generating START, EOM, ACK automatically to output CEC transmission by setting 1 byte data
    - Generating transmission status interrupt when transmitting 1 block (1 byte data and EOM/ACK)
  - HDMI-CEC reception
    - Automatic ACK reply function available
    - Line error detection function available
  - Remote control reception
    - 4 bytes reception buffer
    - Repeat code detection function available

- Real-time clock (RTC)
  The Real-time clock can count Year/Month/Day/Hour/Minute/Second/A day of the week from 01 to 99.

  - The interrupt function with specifying date and time (Year/Month/Day/Hour/Minute/Second/A day of the week.) is available. This function is also available by specifying only Year, Month, Day, Hour or Minute.
  - Timer interrupt function after set time or each set time.
  - Capable of rewriting the time with continuing the time count.
  - Leap year automatic count is available.

- Watch Counter
  The Watch counter is used for wake up from sleep and timer mode.

  Interval timer: up to 64s (Max) @ Sub Clock : 32.768 kHz

- External Interrupt Controller Unit
  - Up to 24 external interrupt input pins
  - Include one non-maskable interrupt (NMI) input pin

- Watchdog Timer (2channels)
  A watchdog timer can generate interrupts or a reset when a time-out value is reached.

  This series consists of two different watchdogs, a "Hardware" watchdog and a "Software" watchdog.

  The "Hardware" watchdog timer is clocked by the built-in low-speed CR oscillator. Therefore, the "Hardware" watchdog is active in any low-power consumption modes except RTC, STOP, Deep standby RTC and Deep standby STOP modes.

- CRC (Cyclic Redundancy Check) Accelerator
  The CRC accelerator calculates the CRC which has a heavy software processing load, and achieves a reduction of the integrity check processing load for reception data and storage.

  CCITT CRC16 and IEEE-802.3 CRC32 are supported.

  - CCITT CRC16 Generator Polynomial: 0x1021
  - IEEE-802.3 CRC32 Generator Polynomial: 0x04C11DB7

- Clock and Reset

[Clocks]

Selectable from five clock sources (2 external oscillators, 2 built-in CR oscillators, and Main PLL).

- Main Clock : 4 MHz to 48 MHz
- Sub Clock : 32.768 kHz
- Built-in high-speed CR Clock : 4 MHz
- Built-in low-speed CR Clock : 100 kHz
- Main PLL Clock

[Resets]

- Reset requests from INITX pin
- Power-on reset
- Software reset
- Watchdog timers reset
- Low-voltage detection reset
- Clock Super Visor reset

- Clock Super Visor (CSV)
  Clocks generated by built-in CR oscillators are used to supervise abnormality of the external clocks.

  - If external clock failure (clock stop) is detected, reset is asserted.
  - If external frequency anomaly is detected, interrupt or reset is asserted.

- Low-Voltage Detector (LVD)
  This Series includes 2-stage monitoring of voltage on the VCC pins. When the voltage falls below the voltage that has been set, Low-Voltage Detector generates an interrupt or reset.

  - LVD1: error reporting via interrupt
  - LVD2: auto-reset operation

- Low-Power Consumption Mode
  Six low-power consumption modes supported.
  - SLEEP
  - TIMER
  - RTC
  - STOP
  - Deep standby RTC (selectable between keeping the value of RAM and not)
  - Deep standby STOP (selectable between keeping the value of RAM and not)

- Debug
  - Serial Wire JTAG Debug Port (SWJ-DP)
  - Embedded Trace Macrocells (ETM).*
    *: MB9AF154MA, F155MA and F156MA support only SWJ-DP.

- Unique ID
  Unique value of the device (41-bit) is set.

- Power Supply
  Wide range voltage: VCC = 1.65V to 3.6V

- List of pin functions

  The number after the underscore ("_") in pin names such as XXX_1 and XXX_2 indicates the relocated port number. For these pins, there are multiple pins that provide the same function for the same channel. Use the extended port function register (EPFR) to select the pin.

■ I/O CIRCUIT TYPE

Type	Circuit	Remarks
A		It is possible to select the main oscillation / GPIO function When the main oscillation is selected. • Oscillation feedback resistor : Approximately 1MΩ • With standby mode control When the GPIO is selected. • CMOS level output. • CMOS level hysteresis input • With pull-up resistor control • With standby mode control • Pull-up resistor : Approximately 33kΩ • I_{OH}= -4mA, I_{OL}= 4mA
B		• CMOS level hysteresis input • Pull-up resistor : Approximately 33kΩ

Type	Circuit	Remarks
C		• Open drain output • CMOS level hysteresis input
D		It is possible to select the sub oscillation / GPIO function When the sub oscillation is selected. • Oscillation feedback resistor : Approximately 5MΩ • With standby mode control When the GPIO is selected. • CMOS level output. • CMOS level hysteresis input • With pull-up resistor control • With standby mode control • Pull-up resistor : Approximately 33kΩ • I_{OH}= -4mA, I_{OL}= 4mA

Type	Circuit	Remarks
E		• CMOS level output • CMOS level hysteresis input • With pull-up resistor control • With standby mode control • Pull-up resistor : Approximately 33kΩ • I_{OH}= -4mA, I_{OL}= 4mA • When this pin is used as an I^2C pin, the digital output P-ch transistor is always off
F		• CMOS level output • CMOS level hysteresis input • With input control • Analog input • With pull-up resistor control • With standby mode control • Pull-up resistor : Approximately 33kΩ • I_{OH}= -4mA, I_{OL}= 4mA • When this pin is used as an I^2C pin, the digital output P-ch transistor is always off
G		CMOS level hysteresis input

Type	Circuit	Remarks
H		• CMOS level output • CMOS level hysteresis input • 5V tolerant • With pull-up resistor control • With standby mode control • Pull-up resistor : Approximately 33kΩ • I_{OH}= -4mA, I_{OL}= 4mA • Available to control PZR registers. • When this pin is used as an I^2C pin, the digital output P-ch transistor is always off

■ HANDLING PRECAUTIONS

Any semiconductor devices have inherently a certain rate of failure. The possibility of failure is greatly affected by the conditions in which they are used (circuit conditions, environmental conditions, etc.). This page describes precautions that must be observed to minimize the chance of failure and to obtain higher reliability from your Spansion semiconductor devices.

1. Precautions for Product Design

This section describes precautions when designing electronic equipment using semiconductor devices.

- **Absolute Maximum Ratings**

  Semiconductor devices can be permanently damaged by application of stress (voltage, current, temperature, etc.) in excess of certain established limits, called absolute maximum ratings. Do not exceed these ratings.

- **Recommended Operating Conditions**

  Recommended operating conditions are normal operating ranges for the semiconductor device. All the device's electrical characteristics are warranted when operated within these ranges.

  Always use semiconductor devices within the recommended operating conditions. Operation outside these ranges may adversely affect reliability and could result in device failure.

  No warranty is made with respect to uses, operating conditions, or combinations not represented on the data sheet. Users considering application outside the listed conditions are advised to contact their sales representative beforehand.

- **Processing and Protection of Pins**

  These precautions must be followed when handling the pins which connect semiconductor devices to power supply and input/output functions.

  (1) Preventing Over-Voltage and Over-Current Conditions

  Exposure to voltage or current levels in excess of maximum ratings at any pin is likely to cause deterioration within the device, and in extreme cases leads to permanent damage of the device. Try to prevent such overvoltage or over-current conditions at the design stage.

  (2) Protection of Output Pins

  Shorting of output pins to supply pins or other output pins, or connection to large capacitance can cause large current flows. Such conditions if present for extended periods of time can damage the device.
  Therefore, avoid this type of connection.

  (3) Handling of Unused Input Pins

  Unconnected input pins with very high impedance levels can adversely affect stability of operation. Such pins should be connected through an appropriate resistance to a power supply pin or ground pin.

- **Latch-up**

  Semiconductor devices are constructed by the formation of P-type and N-type areas on a substrate. When subjected to abnormally high voltages, internal parasitic PNPN junctions (called thyristor structures) may be formed, causing large current levels in excess of several hundred mA to flow continuously at the power supply pin. This condition is called latch-up.

  CAUTION: The occurrence of latch-up not only causes loss of reliability in the semiconductor device, but can cause injury or damage from high heat, smoke or flame. To prevent this from happening, do the following:

  (1) Be sure that voltages applied to pins do not exceed the absolute maximum ratings. This should include attention to abnormal noise, surge levels, etc.

  (2) Be sure that abnormal current flows do not occur during the power-on sequence.

- Observance of Safety Regulations and Standards

  Most countries in the world have established standards and regulations regarding safety, protection from electromagnetic interference, etc. Customers are requested to observe applicable regulations and standards in the design of products.

- Fail-Safe Design

  Any semiconductor devices have inherently a certain rate of failure. You must protect against injury, damage or loss from such failures by incorporating safety design measures into your facility and equipment such as redundancy, fire protection, and prevention of over-current levels and other abnormal operating conditions.

- Precautions Related to Usage of Devices

  Spansion semiconductor devices are intended for use in standard applications (computers, office automation and other office equipment, industrial, communications, and measurement equipment, personal or household devices, etc.).

  CAUTION: Customers considering the use of our products in special applications where failure or abnormal operation may directly affect human lives or cause physical injury or property damage, or where extremely high levels of reliability are demanded (such as aerospace systems, atomic energy controls, sea floor repeaters, vehicle operating controls, medical devices for life support, etc.) are requested to consult with sales representatives before such use. The company will not be responsible for damages arising from such use without prior approval.

2. Precautions for Package Mounting

Package mounting may be either lead insertion type or surface mount type. In either case, for heat resistance during soldering, you should only mount under Spansion's recommended conditions. For detailed information about mount conditions, contact your sales representative.

- Lead Insertion Type

  Mounting of lead insertion type packages onto printed circuit boards may be done by two methods: direct soldering on the board, or mounting by using a socket.

  Direct mounting onto boards normally involves processes for inserting leads into through-holes on the board and using the flow soldering (wave soldering) method of applying liquid solder. In this case, the soldering process usually causes leads to be subjected to thermal stress in excess of the absolute ratings for storage temperature. Mounting processes should conform to Spansion recommended mounting conditions.

  If socket mounting is used, differences in surface treatment of the socket contacts and IC lead surfaces can lead to contact deterioration after long periods. For this reason it is recommended that the surface treatment of socket contacts and IC leads be verified before mounting.

- Surface Mount Type

  Surface mount packaging has longer and thinner leads than lead-insertion packaging, and therefore leads are more easily deformed or bent. The use of packages with higher pin counts and narrower pin pitch results in increased susceptibility to open connections caused by deformed pins, or shorting due to solder bridges.

  You must use appropriate mounting techniques. Spansion Inc. recommends the solder reflow method, and has established a ranking of mounting conditions for each product. Users are advised to mount packages in accordance with Spansion ranking of recommended conditions.

- Lead-Free Packaging

  CAUTION: When ball grid array (BGA) packages with Sn-Ag-Cu balls are mounted using Sn-Pb eutectic soldering, junction strength may be reduced under some conditions of use.

- Storage of Semiconductor Devices

  Because plastic chip packages are formed from plastic resins, exposure to natural environmental conditions will cause absorption of moisture. During mounting, the application of heat to a package that has absorbed moisture can cause surfaces to peel, reducing moisture resistance and causing packages to crack. To prevent, do the following:

  (1) Avoid exposure to rapid temperature changes, which cause moisture to condense inside the product. Store products in locations where temperature changes are slight.

  (2) Use dry boxes for product storage. Products should be stored below 70% relative humidity, and at temperatures between 5°C and 30°C.
  When you open Dry Package that recommends humidity 40% to 70% relative humidity.

  (3) When necessary, Spansion Inc. packages semiconductor devices in highly moisture-resistant aluminum laminate bags, with a silica gel desiccant. Devices should be sealed in their aluminum laminate bags for storage.

  (4) Avoid storing packages where they are exposed to corrosive gases or high levels of dust.

- Baking

  Packages that have absorbed moisture may be de-moisturized by baking (heat drying). Follow the Spansion recommended conditions for baking.

  Condition: 125°C/24 h

- Static Electricity

  Because semiconductor devices are particularly susceptible to damage by static electricity, you must take the following precautions:

  (1) Maintain relative humidity in the working environment between 40% and 70%. Use of an apparatus for ion generation may be needed to remove electricity.

  (2) Electrically ground all conveyors, solder vessels, soldering irons and peripheral equipment.

  (3) Eliminate static body electricity by the use of rings or bracelets connected to ground through high resistance (on the level of 1 MΩ).
  Wearing of conductive clothing and shoes, use of conductive floor mats and other measures to minimize shock loads is recommended.

  (4) Ground all fixtures and instruments, or protect with anti-static measures.

  (5) Avoid the use of styrofoam or other highly static-prone materials for storage of completed board assemblies.

3. Precautions for Use Environment

Reliability of semiconductor devices depends on ambient temperature and other conditions as described above.

For reliable performance, do the following:

(1) Humidity

Prolonged use in high humidity can lead to leakage in devices as well as printed circuit boards. If high humidity levels are anticipated, consider anti-humidity processing.

(2) Discharge of Static Electricity

When high-voltage charges exist close to semiconductor devices, discharges can cause abnormal operation. In such cases, use anti-static measures or processing to prevent discharges.

(3) Corrosive Gases, Dust, or Oil

Exposure to corrosive gases or contact with dust or oil may lead to chemical reactions that will adversely affect the device. If you use devices in such conditions, consider ways to prevent such exposure or to protect the devices.

(4) Radiation, Including Cosmic Radiation

Most devices are not designed for environments involving exposure to radiation or cosmic radiation. Users should provide shielding as appropriate.

(5) Smoke, Flame

CAUTION: Plastic molded devices are flammable, and therefore should not be used near combustible substances. If devices begin to smoke or burn, there is danger of the release of toxic gases.

Customers considering the use of Spansion products in other special environmental conditions should consult with sales representatives.

■ HANDLING DEVICES

- Power supply pins

  In products with multiple VCC and VSS pins, respective pins at the same potential are interconnected within the device in order to prevent malfunctions such as latch-up. However, all of these pins should be connected externally to the power supply or ground lines in order to reduce electromagnetic emission levels, to prevent abnormal operation of strobe signals caused by the rise in the ground level, and to conform to the total output current rating.

  Moreover, connect the current supply source with each Power supply pin and GND pin of this device at low impedance. It is also advisable that a ceramic capacitor of approximately 0.1 µF be connected as a bypass capacitor between each Power supply pin and GND pin near this device.

- Stabilizing power supply voltage

  A malfunction may occur when the power supply voltage fluctuates rapidly even though the fluctuation is within the recommended operating conditions of the VCC power supply voltage. As a rule, with voltage stabilization, suppress the voltage fluctuation so that the fluctuation in VCC ripple (peak-to-peak value) at the commercial frequency (50 Hz/60 Hz) does not exceed 10% of the VCC value in the recommended operating conditions, and the transient fluctuation rate does not exceed 0.1 V/µs when there is a momentary fluctuation on switching the power supply.

- Crystal oscillator circuit

  Noise near the X0/X1 and X0A/X1A pins may cause the device to malfunction. Design the printed circuit board so that X0/X1, X0A/X1A pins, the crystal oscillator, and the bypass capacitor to ground are located as close to the device as possible.

  It is strongly recommended that the PC board artwork be designed such that the X0/X1 and X0A/X1A pins are surrounded by ground plane as this is expected to produce stable operation.

  Evaluate oscillation of your using crystal oscillator by your mount board.

- Sub crystal oscillator

  This series sub oscillator circuit is low gain to keep the low current consumption.
  The crystal oscillator to fill the following conditions is recommended for sub crystal oscillator to stabilize the oscillation.

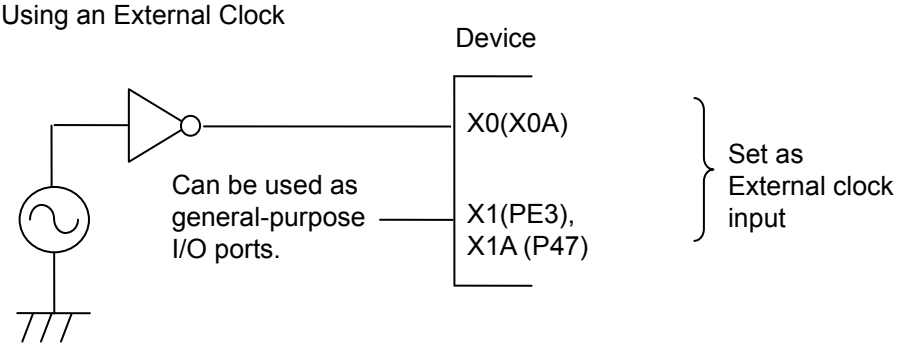
  • Surface mount type
  Size : More than 3.2mm × 1.5mm
  Load capacitance : Approximately 6pF to 7pF

  • Lead type
  Load capacitance : Approximately 6pF to 7pF

- Using an external clock

  When using an external clock as an input of the main clock, set X0/X1 to the external clock input, and input the clock to X0. X1(PE3) can be used as a general-purpose I/O port.
  Similarly, when using an external clock as an input of the sub clock, set X0A/X1A to the external clock input, and input the clock to X0A. X1A (P47) can be used as a general-purpose I/O port.

  • Example of Using an External Clock

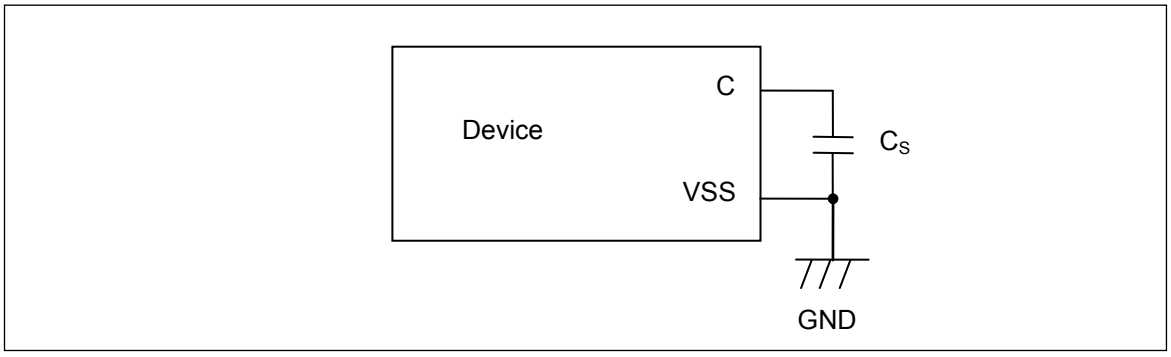


- Handling when using Multi-function serial pin as I^2C pin

  If it is using the multi-function serial pin as I^2C pins, P-ch transistor of digital output is always disabled. However, I^2C pins need to keep the electrical characteristic like other pins and not to connect to the external I^2C bus system with power OFF.

- C pin

  This series contains the regulator. Be sure to connect a smoothing capacitor (C_S) for the regulator between the C pin and the GND pin. Please use a ceramic capacitor or a capacitor of equivalent frequency characteristics as a smoothing capacitor.
  However, some laminated ceramic capacitors have the characteristics of capacitance variation due to thermal fluctuation (F characteristics and Y5V characteristics). Please select the capacitor that meets the specifications in the operating conditions to use by evaluating the temperature characteristics of a capacitor.
  A smoothing capacitor of about 4.7uF would be recommended for this series.



- Mode pins (MD0)

  Connect the MD pin (MD0) directly to VCC or VSS pins. Design the printed circuit board such that the pull-up/down resistor stays low, as well as the distance between the mode pins and VCC pins or VSS pins is as short as possible and the connection impedance is low, when the pins are pulled-up/down such as for switching the pin level and rewriting the Flash memory data. It is because of preventing the device erroneously switching to test mode due to noise.

- Notes on power-on

  Turn power on/off in the following order or at the same time.
  If not using the A/D converter, connect AVCC = VCC and AVSS = VSS.

  Turning on : VCC →AVCC → AVRH

  Turning off : AVRH → AVCC → VCC

- Serial Communication

  There is a possibility to receive wrong data due to the noise or other causes on the serial communication.
  Therefore, design a printed circuit board so as to avoid noise.
  Consider the case of receiving wrong data due to noise, perform error detection such as by applying a checksum of data at the end. If an error is detected, retransmit the data.

- Differences in features among the products with different memory sizes and between Flash memory products and MASK products

  The electric characteristics including power consumption, ESD, latch-up, noise characteristics, and oscillation characteristics among the products with different memory sizes and between Flash memory products and MASK products are different because chip layout and memory structures are different.

  If you are switching to use a different product of the same series, please make sure to evaluate the electric characteristics.

- Pull-Up function of 5V tolerant I/O

  Please do not input the signal more than VCC voltage at the time of Pull-Up function use of 5V tolerant I/O.

■ PIN STATUS IN EACH CPU STATE

The terms used for pin status have the following meanings.

- INITX=0

  This is the period when the INITX pin is the "L" level.

- INITX=1

  This is the period when the INITX pin is the "H" level.

- SPL=0

  This is the status that the standby pin level setting bit (SPL) in the standby mode control register (STB_CTL) is set to "0".

- SPL=1

  This is the status that the standby pin level setting bit (SPL) in the standby mode control register (STB_CTL) is set to "1".

- Input enabled

  Indicates that the input function can be used.

- Internal input fixed at "0"

  This is the status that the input function cannot be used. Internal input is fixed at "L".

- Hi-Z

  Indicates that the pin drive transistor is disabled and the pin is put in the Hi-Z state.

- Setting disabled

  Indicates that the setting is disabled.

- Maintain previous state

  Maintains the state that was immediately prior to entering the current mode.

  If a built-in peripheral function is operating, the output follows the peripheral function.

  If the pin is being used as a port, that output is maintained.

- Analog input is enabled

  Indicates that the analog input is enabled.

- Trace output

  Indicates that the trace function can be used.

- GPIO selected

  In Deep standby mode, pins switch to the general-purpose I/O port.

1. Absolute Maximum Ratings

Parameter	Symbol	Rating		Unit	Remarks
		Min	Max		
Power supply voltage*1, *2	V_{CC}	V_{SS} - 0.5	V_{SS} + 4.6	V	
Analog power supply voltage*1, *3	AV_{CC}	V_{SS} - 0.5	V_{SS} + 4.6	V	
Analog reference voltage*1, *3	AVRH	V_{SS} - 0.5	V_{SS} + 4.6	V	
Input voltage*1	V_I	V_{SS} - 0.5	V_{CC} + 0.5 (≤ 4.6V)	V	
		V_{SS} - 0.5	V_{SS} + 6.5	V	5V tolerant
Analog pin input voltage*1	V_{IA}	V_{SS} - 0.5	AV_{CC} + 0.5 (≤ 4.6V)	V	
Output voltage*1	V_O	V_{SS} - 0.5	V_{CC} + 0.5 (≤ 4.6V)	V	
"L" level maximum output current*4	I_{OL}	-	10	mA	
"L" level average output current*5	I_{OLAV}	-	4	mA	
"L" level total maximum output current	$\sum I_{OL}$	-	100	mA	
"L" level total average output current*6	$\sum I_{OLAV}$	-	50	mA	
"H" level maximum output current*4	I_{OH}	-	- 10	mA	
"H" level average output current*5	I_{OHAV}	-	- 4	mA	
"H" level total maximum output current	$\sum I_{OH}$	-	- 100	mA	
"H" level total average output current*6	$\sum I_{OHAV}$	-	- 50	mA	
Power consumption	P_D	-	300	mW	
Storage temperature	T_{STG}	- 55	+ 150	°C	

*1 : These parameters are based on the condition that $V_{SS} = AV_{SS} = 0.0V$.
*2 : V_{CC} must not drop below V_{SS} - 0.5V.
*3 : Ensure that the voltage does not exceed V_{CC} + 0.5 V, for example, when the power is turned on.
*4 : The maximum output current is defined as the value of the peak current flowing through any one of the corresponding pins.
*5 : The average output current is defined as the average current value flowing through any one of the corresponding pins for a 100 ms period.
*6 : The total average output current is defined as the average current value flowing through all of corresponding pins for a 100ms.

<WARNING>

Semiconductor devices may be permanently damaged by application of stress (including, without limitation, voltage, current or temperature) in excess of absolute maximum ratings.
Do not exceed any of these ratings.

2. Recommended Operating Conditions

(V_{SS} = AV_{SS} = 0.0V)

Parameter	Symbol	Conditions	Value		Unit	Remarks
			Min	Max		
Power supply voltage	V_{CC}	-	1.65*2	3.6	V	
Analog power supply voltage	AV_{CC}	-	1.65	3.6	V	AV_{CC} = V_{CC}
Analog reference voltage	AVRH	-	2.7	AV_{CC}	V	$AV_{CC} \geq 2.7V$
			AV_{CC}	AV_{CC}	V	$AV_{CC} < 2.7V$
Smoothing capacitor	C_S	-	1	10	µF	For Regulator *1
Operating temperature	Ta	-	- 40	+ 85	°C	

*1 : See "• C Pin" in "■ HANDLING DEVICES" for the connection of the smoothing capacitor.

*2 : In between less than the minimum power supply voltage and low voltage reset/interrupt detection voltage or more, instruction execution and low voltage detection function by built-in High-speed CR(including Main PLL is used) or built-in Low-speed CR is possible to operate only.

<WARNING>

The recommended operating conditions are required in order to ensure the normal operation of the semiconductor device. All of the device's electrical characteristics are warranted when the device is operated under these conditions.

Any use of semiconductor devices will be under their recommended operating condition.

Operation under any conditions other than these conditions may adversely affect reliability of device and could result in device failure.

No warranty is made with respect to any use, operating conditions or combinations not represented on this data sheet. If you are considering application under any conditions other than listed herein, please contact sales representatives beforehand.

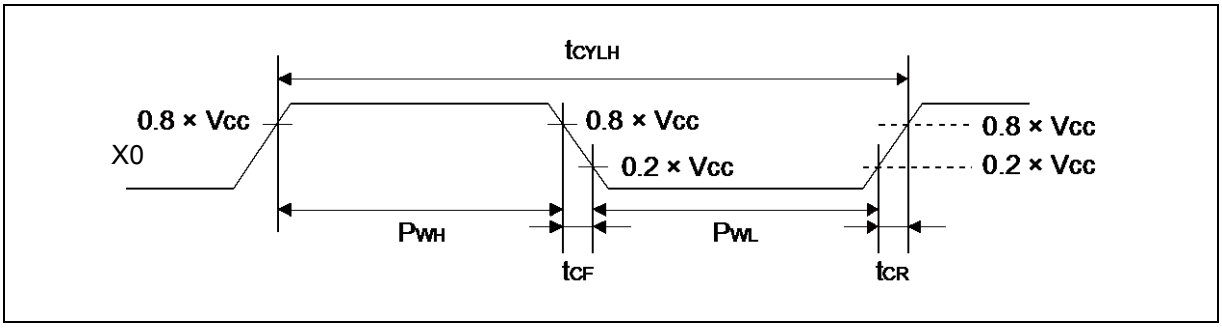
*2: For about each APB bus which each peripheral is connected to, see "■ BLOCK DIAGRAM" in this data sheet.

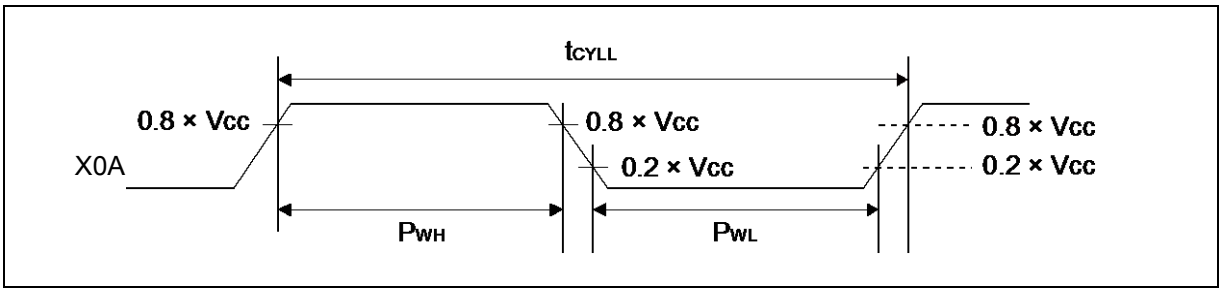


(2) Sub Clock Input Characteristics

(V_{CC} = 1.65V to 3.6V, V_{SS} = 0V, Ta = - 40°C to + 85°C)

Parameter	Symbol	Pin name	Conditions	Value			Unit	Remarks
				Min	Typ	Max		
Input frequency	F_{CL}	X0A, X1A	-	-	32.768	-	kHz	When crystal oscillator is connected*
			-	32	-	100	kHz	When using external clock
Input clock cycle	t_{CYLL}		-	10	-	31.25	µs	When using external clock
Input clock pulse width	-		P_{WH}/t_{CYLL}, P_{WL}/t_{CYLL}	45	-	55	%	When using external clock

*: For more information about crystal oscillator, see "●Sub crystal oscillator" in "■HANDLING DEVICES".



(3) Built-in CR Oscillation Characteristics

- Built-in high-speed CR

(V_{CC} = 1.65V to 3.6V, V_{SS} = 0V, Ta = - 40°C to + 85°C)

Parameter	Symbol	Conditions	Value			Unit	Remarks
			Min	Typ	Max		
Clock frequency	F_{CRH}	Ta = + 25°C, $V_{CC} \geq$ 2.7V	3.94	4	4.06	MHz	When trimming*1
		Ta = - 20°C to + 85°C, $V_{CC} \geq$ 2.7V	3.92	4	4.08		
		Ta = - 40°C to + 85°C, $V_{CC} \geq$ 2.7V	3.88	4	4.12		
		Ta = + 25°C, V_{CC} < 2.7V	3.9	4	4.1		
		Ta = - 40°C to + 85°C V_{CC} < 2.7V	3.66	4	4.20		
		Ta = - 40°C to + 85°C	2.8	4	5.2		When not trimming
Frequency stabilization time	t_{CRWT}	-	-	-	30	µs	*2

*1: In the case of using the values in CR trimming area of Flash memory at shipment for frequency/temperature trimming.

*2: This is the time to stabilize the frequency of high-speed CR clock after setting trimming value. This period is able to use high-speed CR clock as source clock.

- Built-in low-speed CR

(V_{CC} = 1.65V to 3.6V, V_{SS} = 0V, Ta = - 40°C to + 85°C)

Parameter	Symbol	Conditions	Value			Unit	Remarks
			Min	Typ	Max		
Clock frequency	F_{CRL}	-	50	100	150	kHz	

(4-1) Operating Conditions of Main PLL (In the case of using main clock for input of PLL)

(V_{CC} = 1.65V to 3.6V, V_{SS} = 0V, Ta = - 40°C to + 85°C)

Parameter	Symbol	Value			Unit	Remarks
		Min	Typ	Max		
PLL oscillation stabilization wait time*1 (LOCK UP time)	t_{LOCK}	100	-	-	µs	
PLL input clock frequency	F_{PLLI}	4	-	16	MHz	
PLL multiplication rate	-	5	-	37	multiplier	
PLL macro oscillation clock frequency	F_{PLLO}	75	-	150	MHz	
Main PLL clock frequency*2	F_{CLKPLL}	-	-	40	MHz	

*1: Time from when the PLL starts operating until the oscillation stabilizes.

*2: For more information about Main PLL clock (CLKPLL), see "Chapter: Clock" in "FM3 Family PERIPHERAL MANUAL".

(4-2) Operating Conditions of Main PLL (In the case of using the built-in high-speed CR for input clock of main PLL)

(V_{CC} = 1.65V to 3.6V, V_{SS} = 0V, Ta = - 40°C to + 85°C)

Parameter	Symbol	Value			Unit	Remarks
		Min	Typ	Max		
PLL oscillation stabilization wait time*1 (LOCK UP time)	t_{LOCK}	100	-	-	µs	
PLL input clock frequency	F_{PLLI}	3.8	4	4.2	MHz	
PLL multiplication rate	-	19	-	35	multiplier	
PLL macro oscillation clock frequency	F_{PLLO}	72	-	150	MHz	
Main PLL clock frequency*2	F_{CLKPLL}	-	-	40	MHz	

*1: Time from when the PLL starts operating until the oscillation stabilizes.

*2: For more information about Main PLL clock (CLKPLL), see "Chapter: Clock" in "FM3 Family PERIPHERAL MANUAL".

Note: Make sure to input to the main PLL source clock, the high-speed CR clock (CLKHC) that the frequency has been trimmed.

(5) Reset Input Characteristics

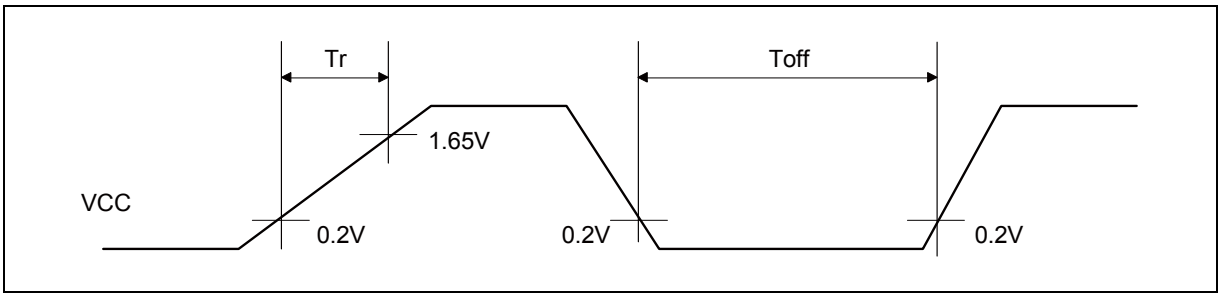
(V_{CC} = 1.65V to 3.6V, V_{SS} = 0V, Ta = - 40°C to + 85°C)

Parameter	Symbol	Pin name	Conditions	Value		Unit	Remarks
				Min	Max		
Reset input time	t_{INITX}	INITX	-	500	-	ns	

(6) Power-on Reset Timing

(V_{CC}= 1.65V to 3.6V, V_{SS} = 0V, Ta = - 40°C to + 85°C)

Parameter	Symbol	Pin name	Value		Unit	Remarks
			Min	Max		
Power supply rising time	Tr	VCC	0	-	ms	
Power supply shut down time	Toff		1	-	ms	



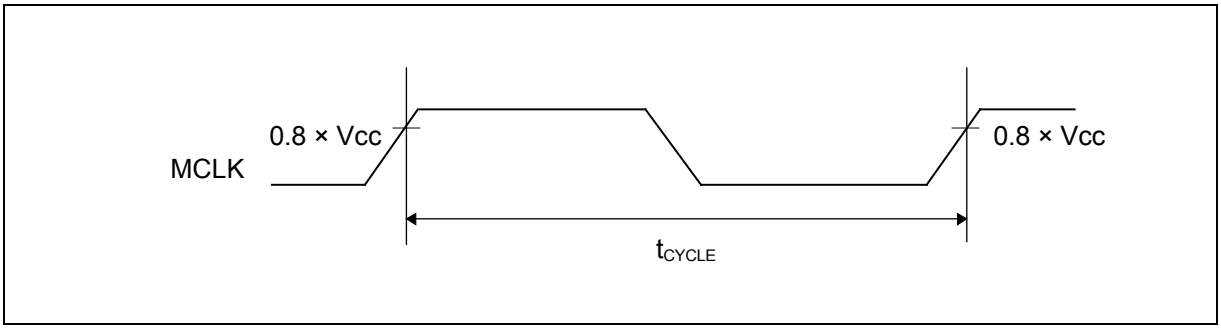
(7) External Bus Timing

- External bus clock output characteristics

(V_{CC} = 1.65V to 3.6V, V_{SS} = 0V, Ta = - 40°C to + 85°C)

Parameter	Symbol	Pin name	Conditions	Value		Unit
				Min	Max	
Output frequency	t_{CYCLE}	MCLKOUT*	$V_{CC} \geq 2.7$ V	-	40	MHz
			$V_{CC} < 2.7$ V	-	20	MHz

*: The external bus clock (MCLKOUT) is a divided clock of HCLK.
For more information about setting of clock divider, see "Chapter: External Bus Interface" in "FM3 Family PERIPHERAL MANUAL".



- External bus signal input/output characteristics

(V_{CC} = 1.65V to 3.6V, V_{SS} = 0V, Ta = - 40°C to + 85°C)

Parameter	Symbol	Conditions	Value	Unit	Remarks
Signal input characteristics	V_{IH}	-	0.8 × V_{CC}	V

*1: R and C_L represent the pull-up resistor and load capacitance of the SCL and SDA lines, respectively.
Vp indicates the power supply voltage of the pull-up resistor and I_{OL} indicates V_{OL} guaranteed current.
*2: The maximum t_{HDDAT} must satisfy that it does not extend at least "L" period (t_{LOW}) of device's SCL signal.
*3: A Fast-mode I²C bus device can be used on a Standard-mode I²C bus system as long as the device satisfies the requirement of "$t_{SUDAT} \geq 250$ ns".
*4: t_{CYCP} is the APB bus clock cycle time.
About the APB bus number that I²C is connected to, see "■BLOCK DIAGRAM" in this data sheet.
To use Standard-mode, set the APB bus clock at 2 MHz or more.
To use Fast-mode, set the APB bus clock at 8 MHz or more.

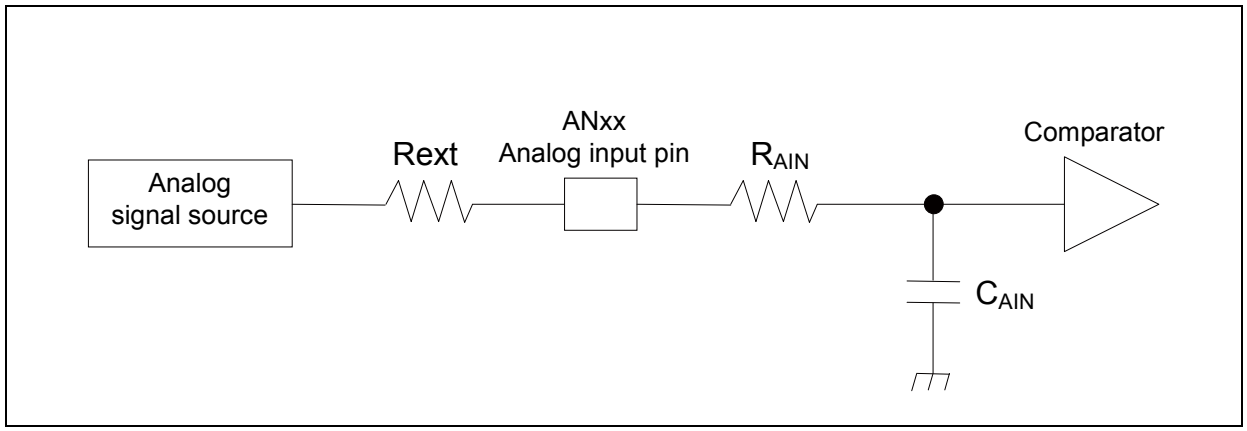
*1: The conversion time is the value of sampling time (Ts) + compare time (Tc).
The condition of the minimum conversion time is when the value of sampling time: 600ns, the value of compare time: 1400ns ($AV_{CC} \geq 2.7V$).
Ensure that it satisfies the value of the sampling time (Ts) and compare clock cycle (Tcck).
For setting of the sampling time and compare clock cycle, see "Chapter: A/D Converter" in "FM3 Family PERIPHERAL MANUAL Analog Macro Part".
The A/D Converter register are reflected in the operation according to the APB bus clock timing.
The sampling clock and compare clock is generated from the Base clock (HCLK).
About the APB bus number which the A/D Converter is connected to, see "■BLOCK DIAGRAM" in this data sheet.

*2: A necessary sampling time changes by external impedance.
Ensure that it sets the sampling time to satisfy (Equation 1).

*3: The compare time (Tc) is the value of (Equation 2).



(Equation 1) $Ts \geq (R_{AIN} + Rext) \times C_{AIN} \times 9$

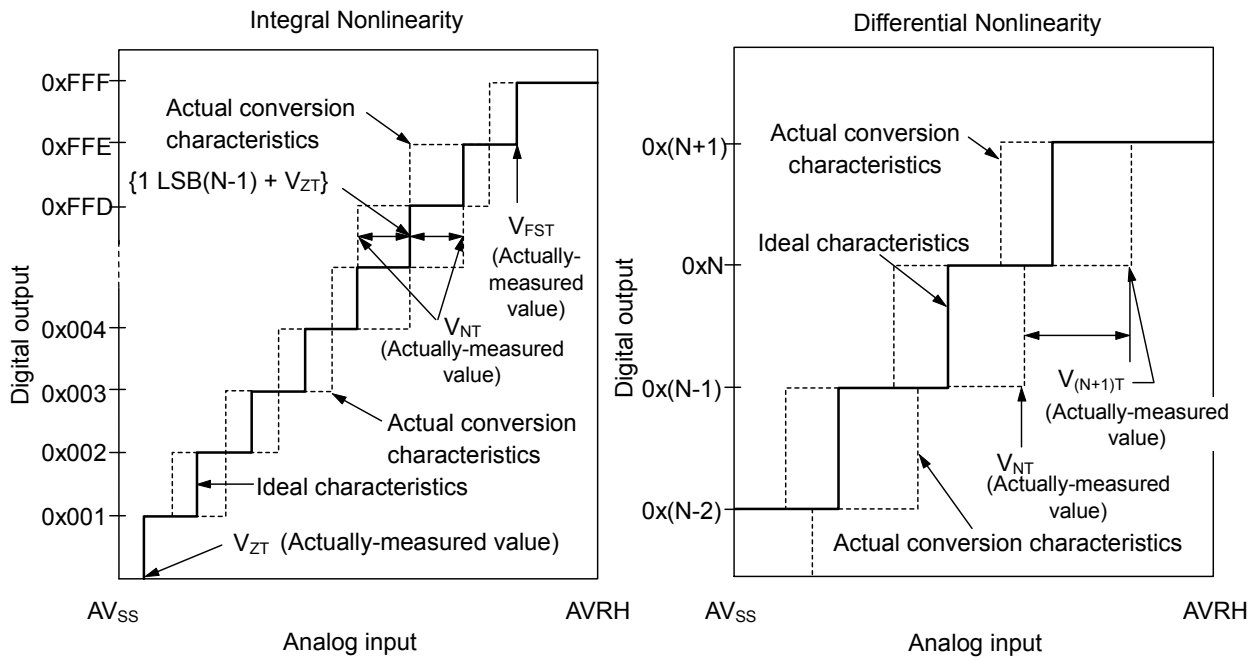
Ts : Sampling time[ns]
R_{AIN} : input resistor of A/D[kΩ] = 2.2kΩ at 2.7V ≤ AVCC ≤ 3.6V
input resistor of A/D[kΩ] = 5.5kΩ at 1.8V ≤ AVCC ≤ 2.7V
input resistor of A/D[kΩ] = 10.5kΩ at 1.65V ≤ AVCC ≤ 1.8V
C_{AIN} : input capacity of A/D[pF] = 9.4pF at 1.65V ≤ AVCC ≤ 3.6V
Rext : Output impedance of external circuit[kΩ]

(Equation 2) $Tc = Tcck \times 14$

Tc : Compare time
Tcck : Compare clock cycle

- Definition of 12-bit A/D Converter Terms

  - Resolution : Analog variation that is recognized by an A/D converter.
  - Integral Nonlinearity : Deviation of the line between the zero-transition point (0b000000000000 ⟷ 0b000000000001) and the full-scale transition point (0b111111111110 ⟷ 0b111111111111) from the actual conversion characteristics.
  - Differential Nonlinearity : Deviation from the ideal value of the input voltage that is required to change the output code by 1 LSB.



$$\text{Integral Nonlinearity of digital output N} = \frac{V_{NT} - \{1LSB \times (N - 1) + V_{ZT}\}}{1LSB} \text{ [LSB]}$$

$$\text{Differential Nonlinearity of digital output N} = \frac{V_{(N+1)T} - V_{NT}}{1LSB} - 1 \text{ [LSB]}$$

$$1LSB = \frac{V_{FST} - V_{ZT}}{4094}$$

N : A/D converter digital output value.
V_{ZT} : Voltage at which the digital output changes from 0x000 to 0x001.
V_{FST} : Voltage at which the digital output changes from 0xFFE to 0xFFF.
V_{NT} : Voltage at which the digital output changes from 0x(N − 1) to 0xN.

7. Flash Memory Write/Erase Characteristics

(1) Write / Erase time

(V_{CC} = 1.65V to 3.6V, Ta = - 40°C to + 85°C)

Parameter		Value			Unit	Remarks
		Min	Typ	Max		
Sector erase time	Large Sector	-	1.1	2.7	s	Includes write time prior to internal erase
	Small Sector		0.3	0.9		
Half word (16-bit) write time		-	30	528	µs	Not including system-level overhead time
Chip erase time		-	11.2	30.5	s	Includes write time prior to internal erase

(2) Write cycles and data hold time

Erase/write cycles (cycle)	Data hold time (year)	Remarks
1,000	20*	
10,000	10*	

*: This value comes from the technology qualification (using Arrhenius equation to translate high temperature acceleration test result into average temperature value at + 85°C) .

Revision 1.0		
-	-	Preliminary → Data Sheet
2	■FEATURES ●On-chip Memories	Corrected the description of "Flash memory".
8	■PRODUCT LINEUP ●Function	Corrected the value of channel number of the "Base Timer".
62	■HANDLING DEVICES	• Added the description of "Crystal oscillator circuit". • Added the description of "Sub crystal oscillator".
65	■BLOCK DIAGRAM	Corrected the figure. • TIOA: input → input/output • TIOB: output → input
66	■MEMORY MAP ●Memory Map (1)	Corrected the value of address of "SRAM0".
67	●Memory Map (2)	Added the footnote.
71, 72	■PIN STATUS IN EACH CPU STATE • List of Pin Status	• Corrected the Return from Deep standby mode state of "Pin status type H". • Corrected the functon group of "Pin status type I".
77, 78	■ELECTRICAL CHARACTERISTICS 3. DC Characteristics (1) Current Rating	• Revised the value of "TBD". • Revised the typical value of "Power supply voltage (I_{CCH}, I_{CCT}, I_{CCR})". • Added the "Flash Memory Write/Erase current ($I_{CCFLASH}$)". • Added the footnote.
81	4. AC Characteristics (2) Sub Clock Input Characteristics	• Added the description of Note of "Input frequency (F_{CL})". • Added the footnote.
	(3) Built-in CR Oscillation Characteristics • Built-in high-speed CR	• Reviced the condition. • Corrected the value. • Added the item of "Frequency stabilization time". • Added the footnote.
85, 86	(7) External Bus Timing • Separate Bus Access Asynchronous SRAM Mode	• Corrected the value. • Deleted the "MWEX ↓ → Data output time". • Added the "MCSX ↓ → Data output time". • Corrected the figure.
87	• Separate Bus Access Synchronous SRAM Mode	• Corrected the "MCLK↑ → Data output time". • Added the "MCLK↑ → Data hold time". • Corrected the figure.
95, 97, 99, 101	(9) CSIO Timming	Corrected the description of section title. UART Timming → CSIO Timming
		Corrected the description of "Note". UART is connected → Multi-function Serial is connected
106	(12) I^2C Timing	Added the footnote.
109	5. 12-bit A/D Converter	• Revised the parameter. • Revised the symbol. • Corrected the value.
111	Definition of 12-bit A/D Converter Terms	• Revised the parameter. • Revised the symbol.
112	6. Low-Voltage Detection Characteristics (1) Low-Voltage Detection Reset	• Corrected "Conditions" and "Value" in the table. • Added the Item. • Added the footnote.
113	(2) Interrupt of Low-Voltage Detection	Added the Item.
Revision 1.1		
-	-	Company name and layout design change
Revision 2.0		
-	-	Corrected the Series name. MB9A150R Series → MB9A150RA Series

The products described in this document are designed, developed and manufactured as contemplated for general use, including without limitation, ordinary industrial use, general office use, personal use, and household use, but are not designed, developed and manufactured as contemplated (1) for any use that includes fatal risks or dangers that, unless extremely high safety is secured, could have a serious effect to the public, and could lead directly to death, personal injury, severe physical damage or other loss (i.e., nuclear reaction control in nuclear facility, aircraft flight control, air traffic control, mass transport control, medical life support system, missile launch control in weapon system), or (2) for any use where chance of failure is intolerable (i.e., submersible repeater and artificial satellite). Please note that Spansion will not be liable to you and/or any third party for any claims or damages arising in connection with above-mentioned uses of the products. Any semiconductor devices have an inherent chance of failure. You must protect against injury, damage or loss from such failures by incorporating safety design measures into your facility and equipment such as redundancy, fire protection, and prevention of over-current levels and other abnormal operating conditions. If any products described in this document represent goods or technologies subject to certain restrictions on export under the Foreign Exchange and Foreign Trade Law of Japan, the US Export Administration Regulations or the applicable laws of any other country, the prior authorization by the respective government entity will be required for export of those products.
