

Quad channel high side driver

Datasheet - production data

- Current limitation
- Very low standby power dissipation
- Protection against:
 - Loss of ground & loss of V_{CC}
- Reverse battery protection
- In compliance with the 2002/95/EC european directive

Description

The VNQ600P-E is a quad HSD formed by assembling two VNQ600P-E chips in the same SO-28 package. The VNQ600P-E is a monolithic device designed in STMicroelectronics VIPower M0-3 Technology. The VNQ600P-E is intended for driving any type of multiple loads with one side connected to ground.

This device has four independent channels and four analog sense outputs which deliver currents proportional to the outputs currents.

Active current limitation combined with thermal shutdown and automatic restart protect the device against overload. Device automatically turns off in case of ground pin disconnection.

Features

Type	$R_{DS(on)}^{(1)}$	I_{lim}	V_{CC}
VNQ600AP-E	35 m Ω	25 A	36 V

1. Per each channel

- DC short circuit current: 22 A
- CMOS compatible inputs
- Proportional load current sense.
- Undervoltage & overvoltage shutdown
- Overvoltage clamp
- Thermal shutdown

2 Electrical specifications

2.1 Absolute maximum ratings

Stressing the device above the rating listed in the “Absolute maximum ratings” table may cause permanent damage to the device. These are stress ratings only and operation of the device at these or any other conditions above those indicated in the Operating sections of this specification is not implied. Exposure to Absolute Maximum Rating conditions for extended periods may affect device reliability. Refer also to the STMicroelectronics SURE Program and other relevant quality document.

Table 3. Absolute maximum rating

Symbol	Parameter	Value	Unit
V_{CC}	Supply voltage (continuous)	41	V
$-V_{CC}$	Reverse supply voltage (continuous)	-0.3	V
I_{OUT}	Output current (continuous), for each channel	15	A
I_R	Reverse output current (continuous), for each channel	-15	A
I_{IN}	Input current	±10	mA
V_{CSENSE}	Current sense maximum voltage	-3 +15	V V
I_{GND}	Ground current at $T_{pins} \leq 25\text{ °C}$ (continuous)	-200	mA

$I_{L(off3)}$	Off state output current	$V_{IN} = V_{OUT} = 0\text{ V}$; $V_{CC} = 13\text{ V}$; $T_j = 125^\circ\text{C}$			5	μA
$I_{L(off4)}$	Off state output current	$V_{IN} = V_{OUT} = 0\text{ V}$; $V_{CC} = 13\text{ V}$; $T_j = 25^\circ\text{C}$			3	μA

Note: V_{clamp} and V_{OV} are correlated. Typical difference is 5V.

Table 6. Protections

Symbol	Parameter	Test conditions	Min.	Typ.	Max.	Unit
I_{lim}	DC Short circuit current	$V_{CC} = 13\text{ V}$	25	40	70	A
		$5.5\text{ V} < V_{CC} < 36\text{ V}$			70	A
T_{TSD}	Thermal shutdown temperature		150	175	200	$^\circ\text{C}$
T_R	Thermal reset temperature		135			$^\circ\text{C}$
T_{hyst}	Thermal hysteresis		7	15		$^\circ\text{C}$
V_{demag}	Turn-off output voltage clamp	$I_{OUT} = 2\text{ A}$; $L = 6\text{ mH}$	$V_{CC}-41$	$V_{CC}-48$	$V_{CC}-55$	V
V_{ON}	Output voltage drop limitation	$I_{OUT} = 0.5\text{ A}$; $T_j = -40^\circ\text{C}$ to $+150^\circ\text{C}$		50		mV

Note: To ensure long term reliability under heavy overload or short circuit conditions, protection and related diagnostic signals must be used together with a proper software strategy. If the device is subjected to abnormal conditions, this software must limit the duration and number of activation cycles.

Figure 18. Application schematic

Note: Channels 3 & 4 have the same internal circuit as channel 1 & 2.

4.1 GND protection network against reverse battery

This section provides two solutions for implementing a ground protection network against reverse battery.

4.1.1 Solution 1: a resistor in the ground line (R_{GND} only)

This can be used with any type of load.

The following show how to dimension the R_{GND} resistor:

1. $R_{GND} \leq 600\text{mV} / 2(I_{S(on)max})$
2. $R_{GND} \geq (-V_{CC}) / (-I_{GND})$

where $-I_{GND}$ is the DC reverse ground pin current and can be found in the absolute maximum rating section of the device datasheet.

Power dissipation in R_{GND} (when V_{CC}<0 during reverse battery situations) is:

$$P_D = (-V_{CC})^2 / R_{GND}$$

This resistor can be shared amongst several different HSDs. Please note that the value of this resistor should be calculated with formula (1) where $I_{S(on)max}$ becomes the sum of the maximum on-state currents of the different devices.

Please note that, if the microprocessor ground is not shared by the device ground, then the R_{GND} will produce a shift ($I_{S(on)max} * R_{GND}$) in the input thresholds and the status output values. This shift will vary depending on how many devices are ON in the case of several high side drivers sharing the same R_{GND} .

If the calculated power dissipation requires the use of a large resistor, or several devices have to share the same resistor, then ST suggests using solution 2 below.

4.1.2 Solution 2: a diode (D_{GND}) in the ground line

A resistor ($R_{GND}=1k\Omega$) should be inserted in parallel to D_{GND} if the device will be driving an inductive load. This small signal diode can be safely shared amongst several different HSD. Also in this case, the presence of the ground network will produce a shift ($\pm 600mV$) in the input threshold and the status output values if the microprocessor ground is not common with the device ground. This shift will not vary if more than one HSD shares the same diode/resistor network. Series resistor in INPUT and STATUS lines are also required to prevent that, during battery voltage transient, the current exceeds the Absolute Maximum Rating. Safest configuration for unused INPUT and STATUS pin is to leave them unconnected.

4.2 Load dump protection

D_{ld} is necessary (Voltage Transient Suppressor) if the load dump peak voltage exceeds the V_{CC} maximum DC rating. The same applies if the device is subject to transients on the V_{CC} line that are greater than those shown in the ISO T/R 7637/1 table.

4.3 MCU I/O protection

If a ground protection network is used and negative transients are present on the V_{CC} line, the control pins will be pulled negative. ST suggests to insert a resistor (R_{prot}) in line to prevent the μC I/O pins from latching up.

The value of these resistors is a compromise between the leakage current of μC and the current required by the HSD I/Os (Input levels compatibility) with the latch-up limit of μC I/Os:

$$-V_{CCpeak}/I_{latchup} \leq R_{prot} \leq (V_{OH\mu C} - V_{IH} - V_{GND}) / I_{IHmax}$$

Example

For the following conditions:

$$V_{CCpeak} = -100 V$$

$$I_{latchup} \geq 20 mA$$

$$V_{OH\mu C} \geq 4.5V$$

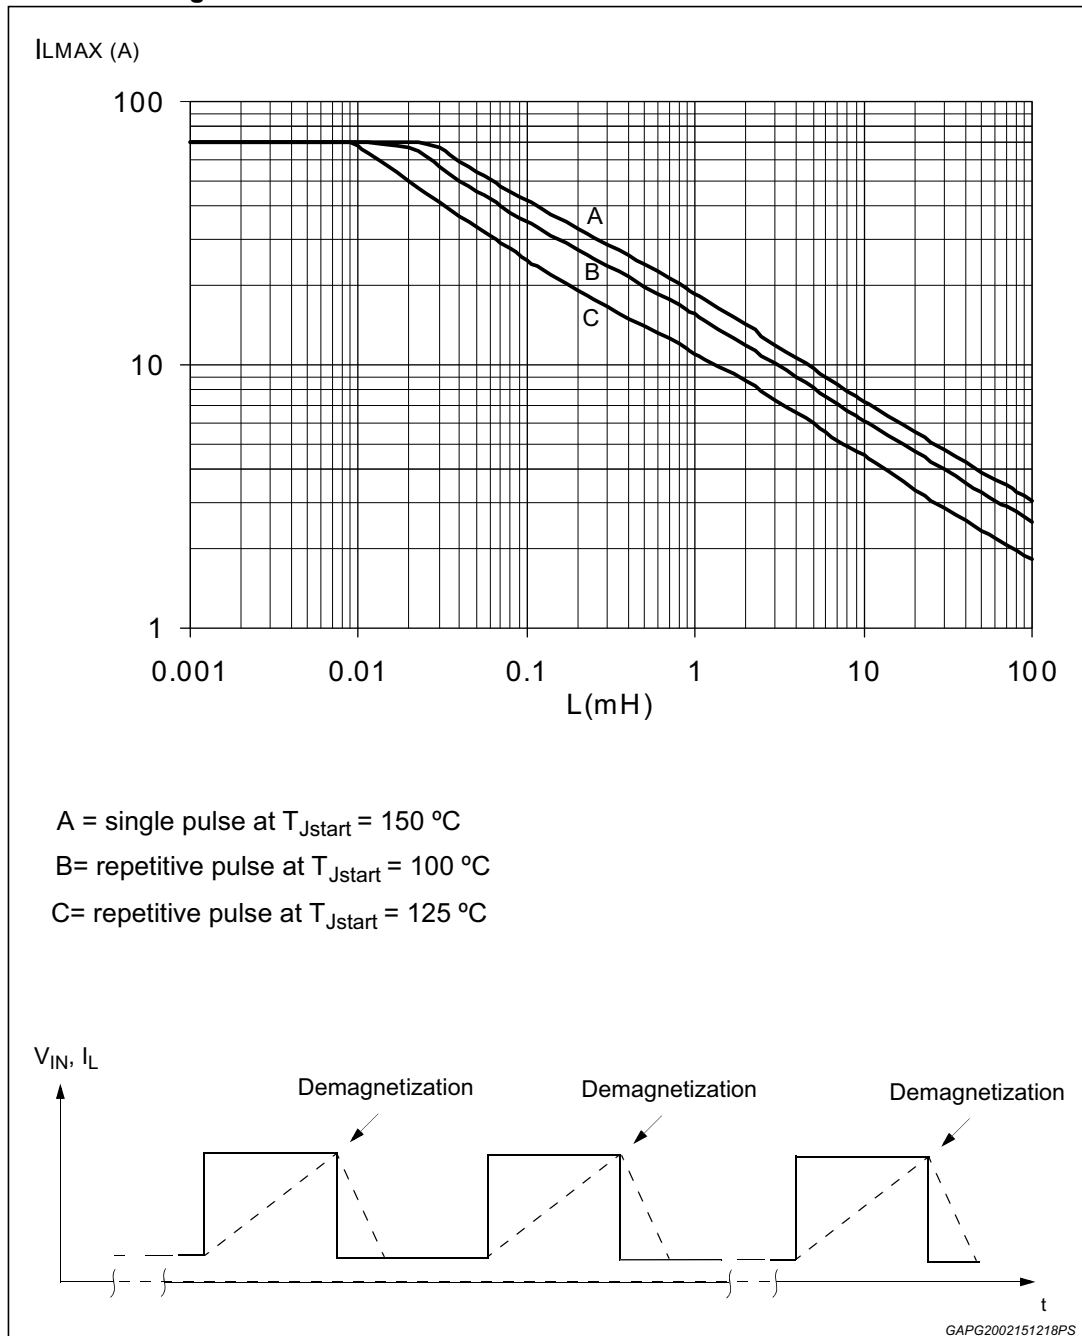

$$5 k\Omega \leq R_{prot} \leq 65 k\Omega.$$

Recommended values are:

$$R_{prot} = 10 k\Omega$$

4.4 Maximum demagnetization energy ($V_{CC} = 13.5\text{ V}$)

Figure 19. Maximum turn-off current versus load inductance

Note: Values are generated with $R_L = 0\Omega$.

In case of repetitive pulses, T_{Jstart} (at beginning of each demagnetization) of every pulse must not exceed the temperature specified above for curves B and C.

5 Package and PCB thermal data

5.1 SO-28 thermal data

Figure 20. SO-28 PC board

Note: Layout condition of R_{th} and Z_{th} measurements (PCB FR4 area= 58mm x 58mm, PCB thickness=2mm, Cu thickness=35 μ m, Copper areas: 0.5 cm², 3 cm², 6 cm²).

IMPORTANT NOTICE – PLEASE READ CAREFULLY

STMicroelectronics NV and its subsidiaries (“ST”) reserve the right to make changes, corrections, enhancements, modifications, and improvements to ST products and/or to this document at any time without notice. Purchasers should obtain the latest relevant information on ST products before placing orders. ST products are sold pursuant to ST’s terms and conditions of sale in place at the time of order acknowledgement.

Purchasers are solely responsible for the choice, selection, and use of ST products and ST assumes no liability for application assistance or the design of Purchasers’ products.

No license, express or implied, to any intellectual property right is granted by ST herein.

Resale of ST products with provisions different from the information set forth herein shall void any warranty granted by ST for such product.

ST and the ST logo are trademarks of ST. All other product or service names are the property of their respective owners.

Information in this document supersedes and replaces information previously supplied in any prior versions of this document.
